# CareDx Unveils New Patient-Centered Medication Management Features on AlloCare Mobile Health App

2022-08-04

Integration of MedActionPlan PRO Facilitates Patient-Clinician Interaction to Improve Medication Adherence

BRISBANE, Calif.--(BUSINESS WIRE)-- CareDx, Inc. (Nasdaq: CDNA) – The Transplant Company™ focused on the discovery, development, and commercialization of clinically differentiated, high-value healthcare solutions for transplant patients and caregivers – today announced that its AlloCare® mobile health app features expanded medication adherence and patient-provider communication capabilities resulting from the successful integration of MedActionPlan®, an acquisition made last year.

MedActionPlan PRO is a medication management and adherence platform designed to simplify post-transplant medication regimens. It is used by more than 140 transplant centers to simplify post-transplant medication regimens. By integrating MedActionPlan PRO into the AlloCare app, participating transplant centers can now push personalized education, medication regimen details, and reminder alerts directly to their patient's smartphone. Patients are empowered to take greater control of their health and medication adherence.

"CareDx's strategy of delivering patient-centered digital health solutions to improve the transplant journey has come to fruition with the seamless integration of MedActionPlan PRO with our AlloCare app," said Reg Seeto, CEO and President of CareDx. "We are incredibly proud to expand the medication management features on our AlloCare app to help thousands of patients and their clinicians work together to successfully manage complex medication regimens for optimal transplant health and longevity."

The popular AlloCare mobile app, downloaded over 50,000 times, helps patients navigate the pre-transplant

referral and waitlist process, and post-transplant helps to track their personal health metrics and test results, manage their complex medication regimens, and connect with other users who have had a transplant.

“As one of the first users of MedActionPlan PRO, I have been a strong proponent of its use for over two decades. I am extremely pleased that CareDx has integrated this leading medication adherence platform into its AlloCare app as far too many patients experience complications and graft failure due to errors with dosing and timing of medication,” said Pamela Maxwell, PharmD, BCPS, Executive Director of Clinical Pharmacy Services at University Health in San Antonio, Texas.

Added Kiran Dhanireddy, MD, FACS, Vice President of Transplant Institute and Surgical Director of Liver Transplantation at Tampa General Hospital, “The integration of the MedActionPlan PRO platform directly into the AlloCare app is an exciting development that will help participating centers easily send medication information and alerts directly to a patient’s smartphone to promote medication adherence and drive positive health outcomes.”

Medication non-adherence is one of the leading causes of organ transplant graft loss.<sup>1-3</sup> In kidney transplantation, research shows that up to fifty-two percent of patients do not take their medications as prescribed<sup>4</sup> and that up to sixty percent of non-adherence is unintentional and may be a result of forgetting to take medication or lack of awareness of the importance of precise medication regimen adherence.<sup>5</sup> Medication regimens for organ transplant patients are incredibly complex. Adding to transplant medication complexity are regular dose changes, on and off days, and weaning schedules.
